

IO Symposium Rotorua 2010

Our future depends on a balance of fragile systems, with each dependent on the others in different ways and together needing to be managed to meet today's organisational needs without compromising the future.

The theme of this year's New Zealand Psychological Society conference in Rotorua is 'Psychology for a Sustainability Future - Ā hinengaro mā tōkana ā mua'.

To deliver a sustainable future we will need to develop the capability and capacity of our economy so that we may access and develop the knowledge and skills that ensure continuity and performance over the long term. We need to think creatively about how we manage our organisations to achieve this.

Sustainability can have a broad meaning... How will IO Psychology contribute to our future? What stories can you or your colleagues share?

For the IO Symposium at Conference, we are seeking presentations on research and/or practice of IO Psychology that may make a contribution to the theme of sustainability. Theoretical, conceptual, empirical and applied content are all welcome. Individuals, teams, pairs, students, practitioners, academics – it's all good. Please share this invitation with anyone whom you think may be able to contribute.

Please send an abstract (150 word max) no later than **19 March** for consideration.
